Appendix E-2.33b: Search Plan and Results—Worksites

Part D. Chapter 4: Food Environment and Settings

1. What is the impact of worksite-based approaches on the dietary intake, quality, behaviors, and/or preference of employees? (see Appendix E-2.33a: Evidence Portfolio [link])

2. What is the impact of worksite policies on the dietary intake, quality, behaviors, and/or preferences of employees? (see Appendix E-2.34: Evidence Portfolio [link])

3. What is the impact of worksite-based approaches on the weight status of employees? (see Appendix E-2.35: Evidence Portfolio [link])

4. What is the impact of worksite policies on the weight status of employees? (see Appendix E-2.36: Evidence Portfolio [link])

Inclusion/ Exclusion Criteria

Inclusion criteria for the worksite-based systematic reviews included the following:

- Human subjects
- Subject populations from countries with high or very high human development, according to the 2012 Human Development Index
- Anyone who works (adolescents, adults, older adults)
- Subjects who were healthy or at elevated chronic disease risk
- Systematic reviews and meta-analyses
- The intervention or exposure in the reviewed articles was a worksite program, policy or practice targeting dietary behaviors and/or weight status
- The comparator in the reviewed articles was different levels of intervention, different types of intervention, or no intervention/policy (a control group)
- The outcome(s) was(were) dietary intake, dietary quality, dietary behaviors, dietary preferences, or weight-related measures

In addition, articles were included if they were published in English in a peer-reviewed journal between January 2010 and March 2014. If an author was included on more than one primary research article contained within a review that is similar in content, the paper with the most pertinent data/endpoints was included. If data/endpoints from both papers were appropriate, it was made clear that results were from the same intervention. If a primary research article was included in more than one review, the study overlap was noted.

Exclusion criteria for the dietary patterns systematic reviews included:

- Animals and in vitro models
- Subject populations from countries with medium or low human development, according to the Human Development Index
- Children
- Subjects who were hospitalized, diagnosed with disease, and/or receiving medical treatment
- Literature reviews, editorials, and commentaries

Articles were excluded if they were not published in English, or were published before January 2010. Articles, abstracts, and presentations not published in peer-reviewed journals (e.g., websites, magazine articles, Federal reports) were also excluded. Finally, if an author was included on more than one review article or primary research article that was similar in content, the paper with the most pertinent data/endpoints was included, and others were excluded. If a primary research article was included in more than one review, the study overlap was noted.
Included Articles

The following articles have been determined to be relevant for inclusion in the body of evidence used for the systematic review questions:

**Approaches & Diet**

**Policies & Diet**

**Approaches & Weight**

Policies & Weight
